**Internship for Electrical Engineering Student**

To whom it may concern:

IAESTE-Organisation informed me about your offer of undertaking a traineeship for Electrical Engineering students. Comparing my field of study with your work discription, I am convinced that my four years of studying comply with your requirements.

I am in my last term of studies in the field of Electrical Engineering. During the last two years I have been specializing in topics like Medical Engineering and Automation Engineering for Medical Application. My study experience also includes a seven months exchange program at the University of Saskatchewan, Canada. Since passing my "Vordiplom" (intermediate exam), I worked as a student assistant at the university in different projects as you can see in my resume. The first of my two study projects included the topic "Body Impedance Analysis." During the second project about "Hydration Level and Pulse Measurement in Human Body by Ultrasound" I was allowed to gain experience in ultrasonic sensors.

After four years of studying and getting an overview how engineers might work, I am looking forward to acquire industrial experiences and to use my theoretical knowledge.

I hope that I will be given the opportunity to enjoy my internship at your company. Thank you for your consideration and I look forward to your positive response.

Sincerely,

Frank Outgoer
